

Module designation	<i>Coding Theory</i>
Semester(s) in which the module is taught	6
Person responsible for the module	<i>Lusi Harini S.Si., M.Sc.</i>
Language	<i>Bahasa Indonesia</i>
Relation to curriculum	<i>Elective course</i>
Teaching methods	<i>150 minutes lectures and 180 minutes structured activities per week.</i>
Workload (incl. contact hours, self-study hours)	<i>Total workload is 136 hours per semester which consists of 150 minutes lectures, 180 minutes structured activities, and 180 minutes self-study per week for 16 weeks.</i>
Credit points	3
Required and recommended prerequisites for joining the module	<i>MAT6320 - Introduction to Ring Theory</i>
Module objectives/intended learning outcomes	<p><i>CO 1: Appreciating the work and opinions of other groups in conveying ideas in writing and orally</i></p> <p><i>CO 2: Demonstrating a collaborative attitude and independence in carrying out independent and group tasks</i></p> <p><i>CO 3: Communicating ideas for solving mathematical problems in writing and orally</i></p> <p><i>CO 4: Explaining the basic concepts of error correction code theory and being able to apply them to solve related problems.</i></p> <p><i>CO 5: Proving properties, lemmas, and theorems related to basic concepts about finite fields, vector spaces over finite fields, ideals of a ring, linear codes including generator matrices, dual codes, Hamming codes, perfect codes, parity-check matrices, single error correction code decoding, standard array decoding, cyclic codes to be applied in logical reasoning</i></p> <p><i>CO 6: Using algorithms to solve problems related to linear codes including generator matrices, dual codes, Hamming codes, perfect codes, parity-check matrices, single error correction code decoding, standard array decoding, and cyclic codes.</i></p>

Content	<p><i>This course covers the basic concepts of error correction coding, including basic concepts of finite fields, vector spaces over finite fields, ideals of a ring, linear codes including generator matrices, dual codes, Hamming codes, perfect codes, parity-check matrices, single-error correction code decoding, standard array decoding, and cyclic codes.</i></p>																				
Examination forms	<p><i>CO1: Attitude assessment is carried out at each meeting by observation and / or self-assessment techniques using the assumption that basically every student has a good attitude.</i></p>																				
Study and examination requirements	<p><i>The student is given a value of very good or not good attitude if they show it significantly compared to other students in general. The result of attitude assessment is not a component of the final grades, but as one of the requirements to pass the course. Students will pass from this course if at least have a good attitude.</i></p> <p><i>The final mark will be weight as follow:</i></p> <table><tr><th>No</th><th>CO</th><th>Assessment Object</th><th>Assessment Technique</th><th>Weight</th></tr><tr><td>1</td><td>CO 1</td><td>a. Presentat ion b. Discussio n</td><td>Observation</td><td>5% 10%</td></tr><tr><td>2</td><td>CO 2, CO 3, CO 4</td><td>a. Individual assignme nt b. Group assignme nt c. Quiz d. Midterm e. Final test</td><td>Written</td><td>10% 10% 20% 20% 25%</td></tr><tr><td colspan="4">Total</td><td>100%</td></tr></table>	No	CO	Assessment Object	Assessment Technique	Weight	1	CO 1	a. Presentat ion b. Discussio n	Observation	5% 10%	2	CO 2, CO 3, CO 4	a. Individual assignme nt b. Group assignme nt c. Quiz d. Midterm e. Final test	Written	10% 10% 20% 20% 25%	Total				100%
No	CO	Assessment Object	Assessment Technique	Weight																	
1	CO 1	a. Presentat ion b. Discussio n	Observation	5% 10%																	
2	CO 2, CO 3, CO 4	a. Individual assignme nt b. Group assignme nt c. Quiz d. Midterm e. Final test	Written	10% 10% 20% 20% 25%																	
Total				100%
