|---|--|
| Module designation | <i>Introduction to Measure Theory and Integral</i> |
| Semester(s) in which the module is taught | 6 |
| Person responsible for the module | <i>Prof. Dr. Hartono, M.S</i> |
| Language | <i>Bahasa Indonesia</i> |
| Relation to curriculum | <i>Elective course</i> |
| Teaching methods | <i>150 minutes lectures and 180 minutes structured activities per week.</i> |
| Workload (incl. contact hours, self-study hours) | <i>Total workload is 136 hours per semester which consists of 150 minutes lectures, 180 minutes structured activities, and 180 minutes self-study per week for 16 weeks.</i> |
| Credit points | 3 |
| Required and recommended prerequisites for joining the module | <i>MAT6321-Real Analysis</i> |
| Module objectives/intended learning outcomes | <p><i>Students know that/know how to/are able to</i></p> <p><i>CO1: Explain the limitations of Riemann integrals through examples of functions that cannot be integrated using Riemann integrals.</i></p> <p><i>CO2: State and apply the concept of σ-algebra to subsets of real numbers.</i></p> <p><i>CO3: Develop the concept of measure of a set in a measure space.</i></p> <p><i>CO4: Determine and analyze the properties of measurable functions.</i></p> <p><i>CO5: Define and construct the Lebesgue integral through characteristic functions and simple functions.</i></p> <p><i>CO6: Explain and prove the fundamental properties of the Lebesgue integral.</i></p> <p><i>CO7: Apply the Lebesgue integral to solve integral-related problems and compare it with the Riemann integral.</i></p> |
| Content | <p><i>This course begins with a discussion of the Riemann integral of a real-valued function and provides an example of a function that is not Riemann integrable as motivation for discussing the Lebesgue integral. Next, it discusses a space consisting of subsets of real numbers called sigma algebras. From the concept of sigma-algebra, the concept of the measure of a set is developed, and subsequently the concept of a measurable function is developed. Based on the concept of a characteristic function, the concept or definition of the Lebesgue integral is developed. The properties of the Lebesgue integral are used to solve problems related to integrals.</i></p> |

| Examination forms | CO1: Attitude assessment is carried out at each meeting by observation and / or self-assessment techniques using the assumption that basically every student has a good attitude. | | | | | | | | | | | | | | | | | | | | | | | |
|------------------------------------|---|---|----------------------|---------------------------------|----|----|-------------------|----------------------|--------|---|------|----------------------------------|-------------|-----------|---|------------------|---|---------|---------------------------------|-------|--|--|--|------|
| Study and examination requirements | <p>The student is given a value of very good or not good attitude if they show it significantly compared to other students in general. The result of attitude assessment is not a component of the final grades, but as one of the requirements to pass the course. Students will pass from this course if at least have a good attitude.</p> <p>The final mark will be weight as follow:</p> <table border="1"> <thead> <tr> <th>No</th><th>CO</th><th>Assessment Object</th><th>Assessment Technique</th><th>Weight</th></tr> </thead> <tbody> <tr> <td>1</td><td>CO 1</td><td>a. Presentation b. Discussion</td><td>Observation</td><td>5% 10%</td></tr> <tr> <td>2</td><td>CO 2, CO 3, CO 4</td><td>a. Individual assignment b. Group assignment c. Quiz d. Midterm e. Final test</td><td>Written</td><td>10% 10% 20% 20% 25%</td></tr> <tr> <td colspan="4">Total</td><td>100%</td></tr> </tbody> </table> | | | | No | CO | Assessment Object | Assessment Technique | Weight | 1 | CO 1 | a.
